Tasks

1. Layout – 3 columns

For full screenshot check the *screenshot.png* file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

1. File Setup:

- Create an **HTML** document named **three-columns.html**
- Create a **CSS** file named **three-columns.css**

2. Flex order

For full screenshot check the `screenshot.png` file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

1. File Setup:

- Create an **HTML** document named **flex-order.html**
- Create a **CSS** file named **flex-order.css**

3. Calendar

For full screenshot check the `screenshot.png` file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

1. **File Setup:**
 - Create an **HTML** document named **calendar.html**
 - Create a **CSS** file named **calendar.css**

4. Main Navigation

For full screenshot check the *screenshot.png* file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

1. **File Setup:**
 - Create an **HTML** document named **main-navigation.html**
 - Create a **CSS** file named **main-navigation.css**

5. Photo Gallery

For full screenshot check the `screenshot.png` file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

1. File Setup:

- Create an **HTML** document named **photo-gallery.html**
- Create a **CSS** file named **photo-gallery.css**

6. Fancy Quotes

For full screenshot check the `screenshot.png` file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

1. File Setup:

- Create an **HTML** document named **fancy-quotes.html**
- Create a **CSS** file named **fancy-quotes.css**

6. Expandable Tree view

Collapsible & expandable tree view in HTML & CSS only

For full screenshot check the `screenshot.png` file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

1. File Setup:

- Create an **HTML** document named **expandable-tree-view.html**
- Create a **CSS** file named **expandable-tree-view.css**

7. Keyboard

For full screenshot check the `screenshot.png` file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

1. File Setup:

- Create an **HTML** document named **keyboard.html**
- Create a **CSS** file named **keyboard.css**

8. Flexbox Center

Why Flexbox?

For a long time, the only reliable cross-browser compatible tools available for creating CSS layouts were features like floats and positioning. These work, but in some ways they're also limiting and frustrating.

The following simple layout designs are either difficult or impossible to achieve with such tools in any kind of convenient, flexible way:

- Vertically centering a block of content inside its parent.
- Making all the children of a container take up an equal amount of the available width/height, regardless of how much width/height is available.
- Making all columns in a multiple-column layout adopt the same height even if they contain a different amount of content.

As you'll see in subsequent sections, flexbox makes a lot of layout tasks much easier. Let's dig in!

For full screenshot check the `screenshot.png` file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

2. File Setup:

- Create an **HTML** document named **flexbox-center.html**
- Create a **CSS** file named **flexbox-center.css**

9. Layout Sticky Footer

For full screenshot check the screenshot.png file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

3. File Setup:

- Create an **HTML** document named **sticky-footer.html**
- Create a **CSS** file named **sticky-footer.css**

10. Section Banner

For full screenshot check the screenshot.png file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

4. File Setup:

- Create an **HTML** document named **section-banner.html**
- Create a **CSS** file named **section-banner.css**
