BUTTON

Submit

- **Attributes** - Method
 - The HTTP method that the browser uses to submit the form

- Attributes – Method – **Post**
 - Corresponds to the **HTTP POST** method
 - Form data are included in the body of the form and sent to the server

FORM ELEMENTS
(FRONTEND HTML & CSS)

FORM PROCESSING
(BACKEND SERVER)

- Attributes – Method – **Get**
 - **get** - Corresponds to the HTTP GET method
 - Form data are appended to the action attribute URI with a '?' as separator, and the resulting URI is sent to the server
 - Use this method when the form has no side-effects and contains only **ASCII characters**

- **Label**

- The HTML label element represents a caption for an item in a user interface

■ Label

- The label text is not only visually associated with its corresponding text input
 - It is **programmatically associated** with it too
- You can click the associated label to focus/activate the input, as well as the input itself
- This **increased hit area** provides an advantage to anyone trying to **activate the input**, including those using a touch-screen device

The diagram illustrates the concept of an increased hit area for HTML form inputs. It shows three input fields, each with a label above it. The labels are highlighted with a light blue background, and the input fields are also highlighted with a light blue background. This visualizes how the label and input together form a larger area for user interaction, which is particularly useful for touch-screen devices.

input email placeholder
Lorem ipsum dolor sit amet

input email value
Lorem ipsum dolor sit amet

■ Input

- Used to create **interactive controls** for web-based forms in order to accept data from the user
 - A wide variety of types of input data and control widgets are available, depending on the device and user agent
- The **<input>** element is one of the most powerful and complex in all of HTML due to the sheer number of combinations of input types and attributes

INPUT TYPES IN HTML

<code><input type="text"></code>	xyz
<code><input type="password"></code>	*****
<code><input type="radio"></code>	No ☒ Yes
<code><input type="checkbox"></code>	☐ ☐ ☒
<code><input type="button"></code>	Button
<code><input type="color"></code>	<input type="color" value="#0000FF"/>
<code><input type="email"></code>	<input type="email" value="xyz@gmail.com"/>
<code><input type="file"></code>	<input type="file" value="Choose File image.jpg"/>
<code><input type="hidden"></code>	<input type="hidden"/>
<code><input type="image"></code>	<input type="image" value="Submit Image"/>
<code><input type="number"></code>	<input type="number" value="898"/>

■ Textarea

- Represents a **multi-line plain-text editing control**, useful when you want to allow users to enter a sizeable amount of free-form text, for example a comment on a **review** or **feedback** form

HTML Demo: <textarea>

RESET

HTML	CSS	OUTPUT
<pre>1 <label for="story">Tell us your story:</label> 2 3 <textarea id="story" name="story" rows="5" 4 cols="33"> 5 It was a dark and stormy night... 6 </textarea></pre>		Tell us your story: It was a dark and stormy night...

■ Select & Option

- The **<select>** HTML element represents a control that provides a menu of options
- The **<option>** HTML element is used to define an item contained in a **<select>**, an **<optgroup>**, or a **<datalist>** element. As such, **<option>** can represent menu items in popups and other lists of items in an HTML document

HTML Demo: <select> RESET

HTML	CSS	OUTPUT
<pre>1 <label for="pet-select">Choose a pet:</label> 2 3 <select name="pets" id="pet-select"> 4 <option value="">--Please choose an option-- 5 </option> 6 <option value="dog">Dog</option> 7 <option value="cat">Cat</option> 8 <option value="hamster">Hamster</option> 9 <option value="parrot">Parrot</option> 10 <option value="spider">Spider</option> 11 <option value="goldfish">Goldfish</option> 12 </select></pre>		Choose a pet: --Please choose an option-- ▾

■ Button

- Interactive element **activated by** a user with a mouse, keyboard, finger, voice command, or other **assistive technology**. Once activated, it then performs an **action**, such as submitting a form or opening a dialog

HTML Demo: <button> RESET

	HTML	CSS	OUTPUT
1	<code><button class="favorite styled"</code>		
2	<code>type="button">Add to favorites</button></code>		

■ Fieldset & Legend

- The HTML fieldset element is used to **group several controls** as well as labels within a web form

HTML Demo: <fieldset> RESET

HTML	CSS	OUTPUT
<pre>1 <form> 2 <fieldset> 3 <legend>Choose your favorite monster</legend> 4 5 <input type="radio" id="kraken" name="monster" value="K" /> 6 <label for="kraken">Kraken</label>
 7 8 <input type="radio" id="sasquatch" name="monster" value="S" /> 9 <label for="sasquatch">Sasquatch</label>
 10 11 <input type="radio" id="mothman" name="monster" value="M" /> 12 <label for="mothman">Mothman</label> 13 </fieldset> 14 </form></pre>		Choose your favorite monster ☐ Kraken ☐ Sasquatch ☐ Mothman
