Tasks

1. Media Types

For full screenshot check the screenshot.png file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

1. File Setup:

- Create an **HTML** document named **media-types.html**
- Create a **CSS** file named **media-types.css**

2. Element creation

- Add title of the page in an **<h1>** element
- Add **<h2>** elements and p elements for each **<h2>** as shown on the screenshot

3. Styling

- Add the standard reset styling – padding, margin, box-sizing
- Add the following styles the body element:
 1. Padding – 2em
 2. Font – 14px/1.5 Lato, sans-serif
- Add padding-bottom of 1.5em to all paragraphs
- Add the following styles to the body's ::before pseudo element
 1. Background-color - #369
 2. Color - #fff
 3. Padding – 1em 1.5em
 4. Margin-bottom – 2em
 5. Border-radius – 0.3em
- Add the media queries outlined in the text and screenshot

2. Media Features

For full screenshot check the screenshot.png file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

4. File Setup:

- Create an **HTML** document named **media-features.html**
- Create a **CSS** file named **media-features.css**

5. Element creation

- Add title of the page in an **<h1>** element
- Add **<h2>** elements and p elements for each **<h2>** as shown on the screenshot

6. Styling

- Copy styling from Task 1
- Add the media queries outlined in the text and screenshot

3. Logical Operators

Logical Operators

and

Used for combining multiple media features together into a single media query, requiring each chained feature to return true for the query to be true. It is also used for joining media features with media types.

```
@media (min-width: 800px) and (max-width: 1200px) {  
  body::before {  
    display: block;  
    content: 'The viewport width is larger than 800px and smaller than 1200px';  
  }  
}
```

For full screenshot check the `screenshot.png` file in the folder for the task

Objective:

Create a webpage that looks like the screenshot above.

Requirements:

7. File Setup:

- Create an **HTML** document named **logical-operators.html**
- Create a **CSS** file named **logical-operators.css**

8. Element creation

- Add title of the page in an **<h1>** element
- Add **<h2>** elements and **p** elements for each **<h2>** as shown on the screenshot

9. Styling

- Copy styling from Task 1
- Add the media queries outlined in the text and screenshot

4. Media Feature – width

The viewport width is larger than 800px

Media Feature - width, min-width, max-width

width

```
@media (width: 800px) {  
  body::before {  
    display: block;  
    content: 'The viewport width is exactly 800px';  
  }  
}
```
